

## REFERENCE

My name is Svetlin Nakov from Software University Foundation and I have had the pleasure to observe Konstantin Zaraliev's professional growth at Software University Foundation, where he collaboratively develops teaching materials on computer modeling and IT under the supervision of Alexandrina Mehandzhyska. Konstantin is responsible for creating detailed tutorials and exercises, which are essential for our curriculum.

His work involves synthesizing complex technical concepts into accessible and engaging content, which demonstrates not only his profound understanding of computer science but also his ability to communicate effectively.

Konstantin consistently completes his tasks on time and to the expected quality, showing remarkable diligence and commitment to the tasks. His proactive approach is evident as he frequently incorporates a variety of examples and interactive exercises in his materials. This initiative not only enriches the learning experience but also demonstrates his creative problem-solving skills and his dedication to educational excellence.

Furthermore, Konstantin's capabilities extend beyond material development. On February 27, 2024, he participated in presenting the inaugural class on computer modeling and IT for 5th graders, a significant milestone for the Foundation. During this presentation, he confidently addressed a large audience of IT teachers, fielded questions with ease, and explained the project's methodology and outcomes. His performance during this event was not only a testament to his thorough preparation and deep knowledge of the subject matter but also highlighted his strong public speaking and presentation skills.

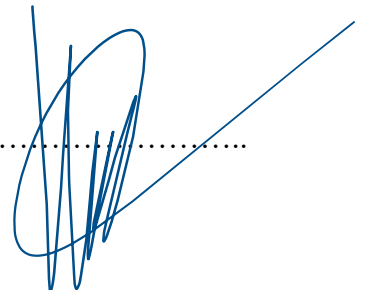

Konstantin's ability to work effectively under guidance while also demonstrating initiative makes him a valuable asset to any team.

I am confident that Konstantin Zaraliev will continue to excel in his endeavors and be an indispensable asset wherever his career may take him. I highly recommend him for any position that seeks a dedicated, skilled, and knowledgeable person in the field of computer science and technology.
